

Project World Cup Spotlight announces new partnership with Mijente

Project World Cup Spotlight is proud to announce a new partnership with **Mijente**, a leading social justice organization dedicated to Latinx rights and justice. This collaboration will focus on the crucial fight against "Tech for ICE," challenging the ways the tech industry enables and profits from the surveillance, arrest, and detention systems used by Immigration and Customs Enforcement.

The partnership highlights the release of a new, comprehensive report by **Mijente**, Just Futures Law, and Surveillance Resistance Lab titled, "**The Tech Behind ICE: Oligarchs, Immigration Enforcement and the Threat to Democracy.**" The report exposes how the Department of Homeland Security's (DHS) influence, powered by invasive surveillance technology and corporate partnerships, has expanded deep into our communities.

This critical report:

- Demonstrates how a select group of oligarchs are leveraging their companies' technology to power mass deportations and surveillance, thereby undermining democratic principles.
- Provides a deep-dive analysis of the top 10 most invasive technologies and contracts used by DHS, from spyware and data analytics to drones.
- Offers concrete strategies for organizing advocacy, research, and litigation to fight back against this expanding surveillance infrastructure.

To launch the report and discuss its findings, **Mijente** will be hosting a public webinar on Monday, June 29th, at 7:00 PM ET. Click this link to register:
